

The Creative Curriculum® Kits for Preschool

Investigations Kit

The hands-on, exploratory nature of studies in *The Creative Curriculum*® classroom taps into children's natural curiosity, resulting in a learning environment that is both fun and intentional. This kit helps support these in-depth investigations and encourages children to investigate their questions the way a scientist might.

The materials in this kit are a wonderful addition to any classroom area, especially the Discovery area and outdoors. Clipboards allow for observational drawing and note-taking to easily happen anywhere and the magnifying glasses and binoculars helps children see things in a new way. This kit includes both nonfiction and fiction texts to introduce children to different cultures and the physical properties of materials.
