

## A Complete Solution for Early Childhood Educators

High-quality early childhood education plays a critical role in ensuring children's success in school and in life. For many programs, achieving high quality can mean investing more time and energy—things that are in short supply for early childhood educators. But when classroom resources such as curriculum and assessment tools work together seamlessly, high quality can become second nature.

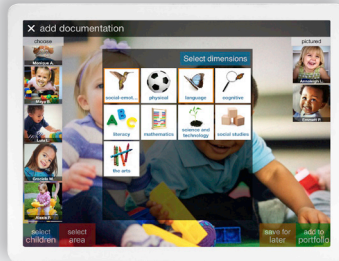

Teaching Strategies®  curriculum, assessment, front end management, and family engagement resources work together to take the guesswork out of individualizing instruction and educating the whole child. While all Teaching Strategies resources can be used independently, they have the capacity to transform teaching and learning when used together.

# A Complete Solution for Early Childhood Educators

## Observe and Document

Teachers observe children throughout the day and use the **MyTeachingStrategies® mobile app** to collect documentation in the form of photos, videos, audio, and notes. Documentation can then be uploaded to **GOLD®** and/or shared with family members via **tadpoles®**.

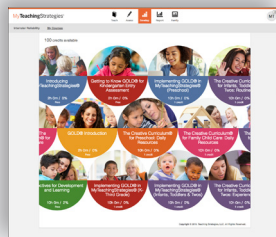

## Communicate and Engage

Family members view shared photos and videos through the **free MyTeachingStrategies® family app**, where they can also provide drop-off notes and communicate directly with teachers and program administrators.

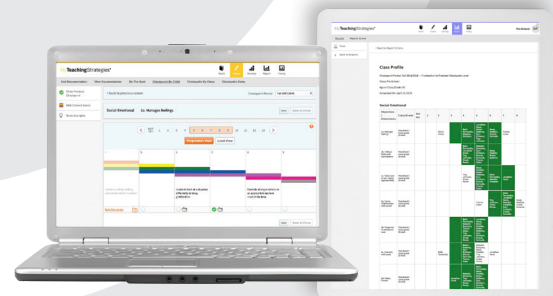

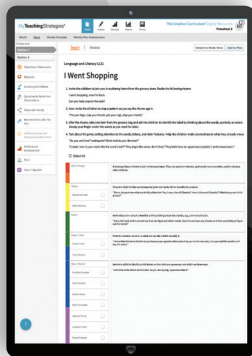

## Learn and Grow

A wide variety of in-person and online **professional development** opportunities gives teachers and administrators the support they need to provide high-quality early childhood experiences.

## Oversee and Manage

Administrators and teachers use **tadpoles®** to streamline day-to-day operations, allowing schools to go paperless while meeting licensing requirements.

## Plan and Individualize

Aligned to the same 38 objectives for development and learning, **GOLD®** and **The Creative Curriculum®** help teachers link assessment data with instructional decisions, enabling them to meet the needs of individual children. With **The Creative Curriculum®**, **Digital Resources**, intentional instruction is even easier, as assessment data is automatically embedded into instructions for planned activities.

## Evaluate and Report

Teachers follow a guided process in **GOLD®** to review the documentation they collected and evaluate children's knowledge, skills, and abilities. They then use that data to generate reports for administrators and families and to make informed decisions about the best ways to support each child's development and learning.

With solutions that work together to translate assessment data into responsive planning, teachers can make learning an individualized experience.
